

Management Information Systems

05*. Getting Prepared for the Analysis & Design Part

Guo, Xunhua

guoxh@tsinghua.edu.cn

清华经管学院
Tsinghua SEM

Updated Schedule

- 6. (April 13) Systems Analysis Fundamentals
- 7. (April 20) Information Gathering
- 8. (April 27) Process Modeling (I)
- 9. (May 9) Process Modeling (II)
- 10. (May 11) Object-Oriented Systems Analysis
- 11. (May 18) The Essentials of Design (I)
- 12. (May 25) The Essentials of Design (II)
- 13. (June 1) Quality Assurance
- 14. (June 8) Conclusion

Phases of the Systems Development Life Cycle

6. (April 13) Systems Analysis Fundamentals

7. (April 20) Information Gathering

A Project-driven Approach

- Projects: AI-Simulated Systems Analysis, Design, & Low-Code Prototyping
- Students will
 - face information asymmetry by interviewing conflicting stakeholders (AI agents)
 - map the logical flows using traditional methodologies (DFDs, ERDs, etc.), and
 - build a functional low-code prototype
- The project is tightly aligned with the textbook
- Students work in groups
- Weight: 20% of Final Grade

Five Parallel Scenarios

- 1. Project Nova (Retail & E-Commerce):
 - Lumina Electronics (卢米纳电子) is suffering from catastrophic "overselling" and severe delays in processing customer returns, leading to furious reviews and lost revenue.
- 2. Project Catalyst (Innovation Competition):
 - A massive startup pitch competition (启航杯创赛) relies on error-prone Excel spreadsheets and manual email dispatching for blind peer-reviews.
- 3. Project Velocity (B2B Logistics & Fleet):
 - A trucking company (极速车队) bleeds money due to empty return trips, untracked maintenance fraud, and paper-based delivery receipts.
- 4. Project CareLink (Healthcare & Premium Eldercare):
 - A home-nursing agency (颐和照护) faces high medical liability risk due to fragmented WeChat medical instructions and physical paper health logs.
- 5. Project Oracle (Enterprise Support & AI Knowledge Agent):
 - Zhiyun Tech (智云科技) is failing its Service Level Agreements (SLAs) because frontline reps cannot find answers in technical documentation, causing massive escalations and furious senior engineers.

Project Target and Phases

- Target: Solid and comprehensive problem analysis and solution design
- Phases:
 - Preparation Phase: Group Formation & Scenario Selection (March 30 - April 13)
 - Phase 1: Project Initiation & Information Gathering (Sessions 6-7: April 13 - 27)
 - Phase 2: Process Modeling & Structured Analysis (Sessions 8-9: April 27 - May 11)
 - Phase 3: System Design & Architecture (Sessions 10-11: May 11 - 25)
 - Phase 4: Quality Assurance & Final Implementation (Sessions 12-13: May 25 - June 8)
- Conclusion (June 8)

Group Work

- Formation
 - Voluntary formation
 - Group size: ≤ 5 students
- Project scenario selection
 - For each scenario: ≤ 2 groups
 - Selection method: registraion (FCFS, TA will arrange)
- Group Work
 - Interviews, information compilation, analysis, design, development
 - Various documents will be required to submit before every class session
 - Presentations in class: at least two times for each group
 - Final deliverables: documents + system prototype

Preparation

- March 30 - April 2: Group formation
- April 4: Scenario introduction posted
- April 7-10: Scenario selection
- April 11-13: Getting familiar with the selected scenario
- Important note:
 - Pay attention to TA's announcements
 - In WeChat group and the Web Learning platform
